

## Example of TS2\_InfoBar4 script

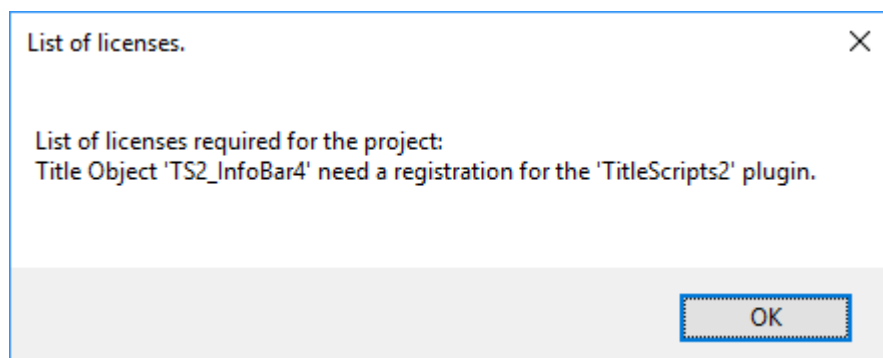

You can organize testing of script operation on any work station with installed Forward TT/TA/TP/TS/Lite software.

You can use the FDTITLEDesigner program for testing:

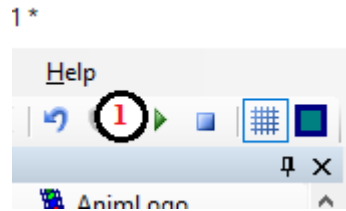

1. Install (if is not installed) the latest version of Forward TT/TA/TP/TS/Lite software. Download installer and get instructions [here](#).

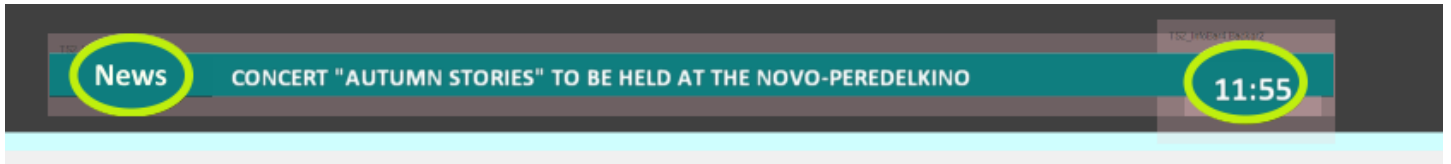

1. The following files are in the ~\TS2\_InfoBar4 folder:
  - title project (1)
  - template of title object with TS2\_InfoBar4 script (2)
  - background for advertisements (3)
  - background for clocks (4)
  - collection of styles for rolling crawl and clocks (5)
  - text file with news (6)
  - instruction about use of example (7)
2. The TitleDesigner program can be opened via desktop shortcut (custom location is: C:\Program Files\ForwardT Software\FDTITLE).
3. Download the TS2\_InfoBar4.SLTitleProj title project.

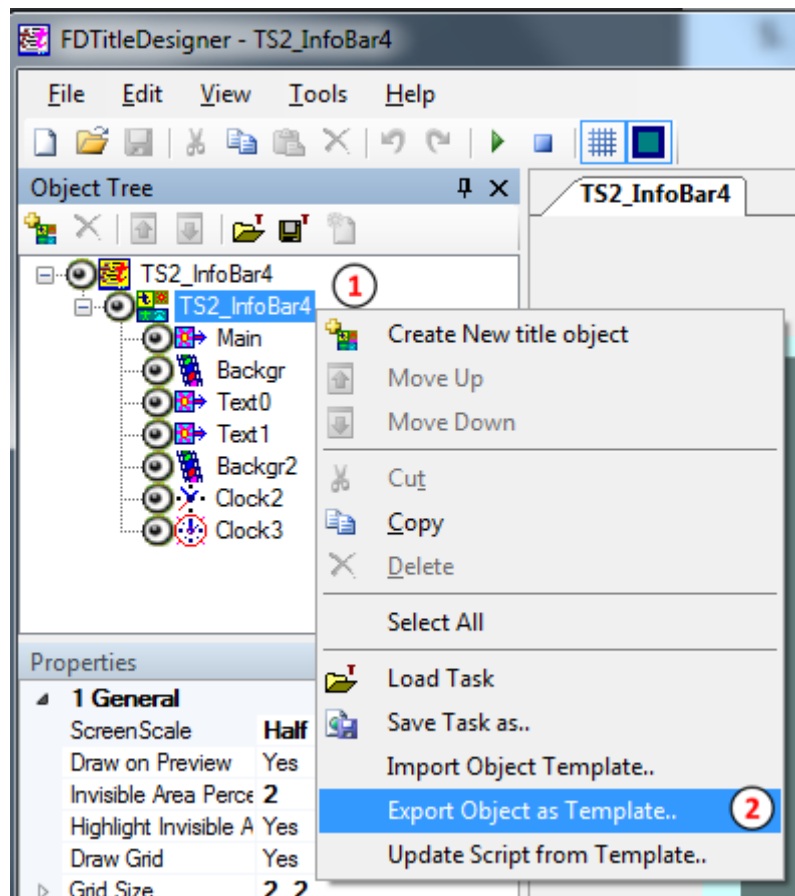

**Important! Testing TS2\_InfoBar4 script in the FDTITLEDesigner program requires no license. Message about list of licenses at script download is informational. It warns that license is required later when the script on broadcast server is used.**

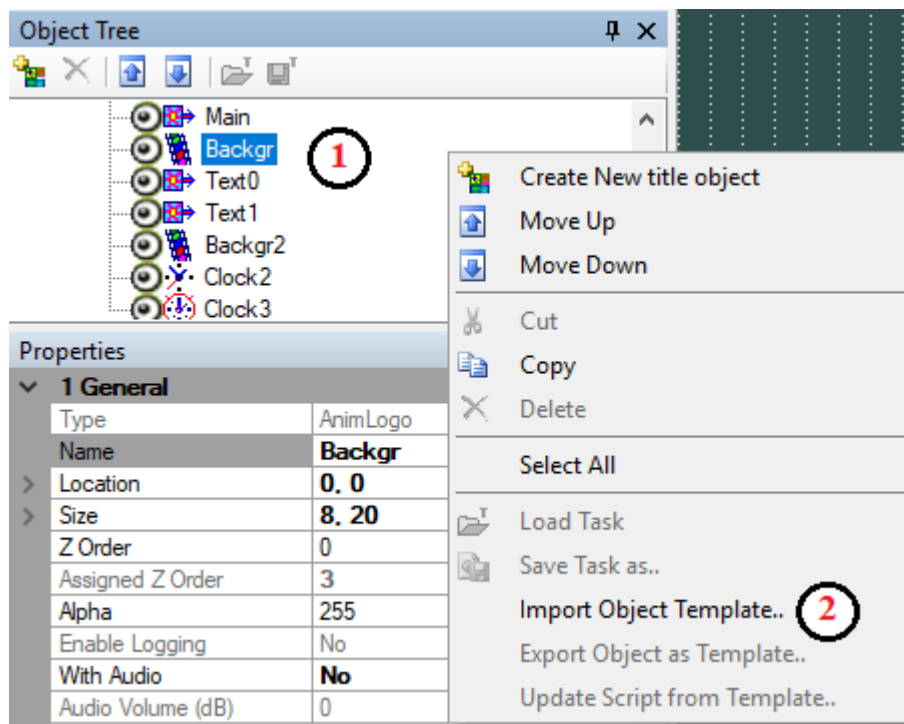

4. Enable preview mode (1).

5. Check operation of script. Configure script for work on your TV channel: adjust location of title elements and script properties, specify your text file with news, collection of styles, etc.

6. Save configured TS2\_InfoBar4 title object to template: right-click title object in object tree (1), select "Export Object as Template..." (2).

7. Import TS2\_InfoBar4 title object from pre-prepared template into your work project: right-click object tree (1) and select "Import Object Template..." (2). Specify the TS2\_InfoBar4.SLTitleTmpl template in appeared dialog window.
